Quarter Scale Auto Club

Quarter Scale oval racing is as close as you can get without strapping on a helmet and climbing into a car.

This is just the tip of the iceberg of information that can be found on our website.

WWW.QSAC.ORG

Visit our site today or the track listed here to get the latest information and find out how you can be racing a Quarter Scale car sooner than you think.

QSAC FAQ's

Q: How fast do they go?

A: That all depends on the track and class. Most classes will average about 40mph per lap.

Q: How much do they cost?

A: You can buy a used car for about \$1000 and get great deals on additional parts and supplies with it. New cars range from \$1700 to \$3000 minus electronics and radio. A good radio with all the servos will cost about \$300. The initial cost for Quarter scale is a tad more than other smaller scale racing. However the cost to maintain and be competitive is lower over time.

Q: How much do they weigh?

A: Stock Cars are a minimum of 30lbs and Sprint Cars are a minimum of 24lbs.

Q: What kind of fuel do you use?

A: We use Vp110 racing fuel at the QSAC NCS events, but any good quality regular pump gas will work. It is a 2 cycle motor so you have to add 2 cycle oil.

Q: Where do you race these things?

A: These cars were originally made for racing in a parking lot. However there are purpose built tracks all over the country. They are mostly asphalt tracks, but there are several dirt tracks popping up.

Q: How long are the races?

A: Races vary depending on the event. There are 500 lap events, but most of the time we race 100 to 300 lap features. Usually there are 2 - 3 heats leading up to the feature of 50 laps each.
